Results

Purpose of the Results Section

The Results section presents the findings of the study objectively and clearly, without interpretation or discussion.

What to Include

1. Participant Characteristics

Begin by describing the study sample.

Examples:

- Number of participants
- Age
- Sex distribution
- Academic year
- Other relevant demographics

2. Main Findings

Present the results related to the primary study objectives.

Examples:

- Prevalence rates
- Mean scores
- Frequencies and percentages
- Associations between variables

3. Secondary Findings

Present additional analyses relevant to the study.

4. Statistical Results

Report:

- p-values
- Confidence intervals (CI)
- Odds ratios (OR)
- Relative risks (RR)
- Correlation coefficients (r)

when applicable.

Tables and Figures

Use tables and figures to summarize data efficiently.

Table Example

Variable	n (%)
Male	120 (48%)
Female	130 (52%)

Figure Example

- Bar charts
- Pie charts
- Histograms
- Scatter plots

Do not repeat every value from a table in the text.

Writing Tips

- Present findings logically.
- Follow the order of the objectives.
- Report important numerical values.
- Be concise and objective.
- Use past tense.

Reporting Statistics

Correct

Poor sleep quality was observed in 58.4% of participants.

Correct

Students with poor sleep quality had significantly higher pain scores ($p < 0.001$).

Correct

Burnout was associated with chronic pain (OR = 2.15, 95% CI: 1.40–3.29).

Common Mistakes

Incorrect

Poor sleep quality was common because medical students experience high academic stress.

(Interpretation belongs in the Discussion section.)

Incorrect

These findings prove that sleep deprivation causes chronic pain.

(Causation should not be claimed unless supported by the study design.)

Incorrect

Only reporting p-values without effect sizes or actual results.

What NOT to Include

- Literature review
- Interpretation of findings
- Comparison with previous studies
- Explanations for results
- Personal opinions

These belong in the Discussion section.

Example

Correct:

A total of 312 students participated in the study. The mean age was 20.8 ± 1.9 years, and 56.4% were female. Poor sleep quality was reported by 61.2% of participants. Students with poor sleep quality had significantly higher chronic pain scores than those with good sleep quality ($p < 0.001$).

AI Usage

AI may assist with language editing and formatting. However, all statistical analyses, calculations, results, and reported values must be independently verified by the authors.

Final Checklist

- ✓ Participant characteristics reported.
- ✓ Results follow study objectives.
- ✓ Statistical values included when appropriate.
- ✓ Tables and figures are properly referenced.
- ✓ No interpretation or discussion included.
- ✓ Results are presented clearly and objectively.

Golden Rule

The Results section answers one question: “What did the study find?” — not “What do the findings mean?”
