RESEARCH. DISCOVER. IMPACT.

Advancing knowledge.
Creating real-world impact.

Title Page, Abstract & Notes

1. Title Page

Purpose

The Title Page provides essential information about the manuscript and its authors. It is the first section editors and reviewers see and should be accurate, professional, and complete.

Main Components

Title

The title should clearly describe the study topic, population, and sometimes the study design.

Good Example

Association Between Sleep Quality and Academic Performance Among Medical Students at Yarmouk University

Weak Example

Sleep and Students

(The title is too vague and does not describe the study.)

Authors

List all authors in the correct order according to their contribution.

Example

Hashem Al-Odainat¹, X Person², Hashem Magableh¹

These numbers do not indicate the order of authorship; they are used only to match each author with their institutional affiliation.

Affiliations

Provide the institution and department for each author.

Example

¹ Faculty of Medicine, Yarmouk University, Irbid 21163, Jordan

² Department of Public Health, Yarmouk University, Irbid 21163, Jordan **21163: Postal code of YU**

Corresponding Author

The author responsible for communication with the journal.

Example

Corresponding Author: Hashem Al-Odainat, Email: HashemAlOdainat@gmail.com

Running title

Write a small title (usually 40 letters, including spaces)

Keywords

Usually 3–8 terms that describe the study. *It's recommended to use MeSh (Pubmed)*

Example

Sleep Quality, Medical Students, Academic Performance, Jordan, Cross-Sectional Study

Common Mistakes

- ✗ Titles that are too short or too broad.
- ✗ Excessive abbreviations.
- ✗ Missing affiliations.
- ✗ Missing corresponding author information.

2. Abstract

Purpose

The Abstract summarizes the entire study in a short format. Many readers only read the abstract before deciding whether to continue reading the paper.

Structured Abstract Components

Background

Briefly explain the problem and why it is important.

Example

Sleep disturbances are common among medical students and may negatively affect academic performance.

Objective

State the research question or study aim.

Example

To investigate the association between sleep quality and academic performance among medical students at Yarmouk University.

Methods

Describe how the study was conducted.

Include:

- Study design
- Population
- Sample size
- Main instruments

Example

A cross-sectional study was conducted among 350 medical students using an online questionnaire. Sleep quality was assessed using the Pittsburgh Sleep Quality Index (PSQI).

Results

Present only the most important findings.

Example

Poor sleep quality was reported by 62.3% of participants. Students with poor sleep quality had significantly lower GPAs compared with students reporting good sleep quality ($p < 0.001$).

Conclusion

Provide the main take-home message.

Example

Poor sleep quality was significantly associated with lower academic performance among medical students.

Full Abstract Example

Background

Sleep disturbances are common among medical students and may negatively affect academic performance.

Objective

To investigate the association between sleep quality and academic performance among medical students at Yarmouk University.

Methods

A cross-sectional study was conducted among 400 medical students using an online questionnaire. Sleep quality was assessed using the Pittsburgh Sleep Quality Index (PSQI).

Results

Poor sleep quality was reported by 62.3% of participants. Students with poor sleep quality had significantly lower GPAs than those with good sleep quality ($p < 0.001$).

Conclusion

Poor sleep quality was significantly associated with lower academic performance among medical students.

Abstract Writing Tips

- ✓ Write the abstract after finishing the manuscript.
- ✓ Include only the most important findings.
- ✓ Stay within the journal word limit.
- ✓ Keep it concise and informative.

Common Mistakes

- ✗ Including references.
- ✗ Including information not found in the manuscript.
- ✗ Writing vague conclusions.
- ✗ Adding discussion or literature review content.

3. Notes (after conclusion section)

Author Contributions

Who did what in the study.

Acknowledgments

Non-authors who contributed support.

AI Usage

Must be disclosed if used according to journal policy.

AI should only assist in writing, not analysis or interpretation.

Funding

State financial support or lack of it.

Conflict of Interest

Declare any conflicts.

Ethical Approval & Consent

Required for human studies.

Data Availability

State whether data can be accessed.

AI Usage

Many journals allow AI-assisted writing if disclosed appropriately (e.g., in the Acknowledgements or Methods section).

Example Disclosure

This manuscript was prepared with assistance from artificial intelligence tools for language editing and writing support. The authors reviewed and verified all content, references, analyses, results, and conclusions.

AI should only assist with writing. Authors remain responsible for verifying all references, analyses, results, and interpretations. AI should not be relied upon for independent data analysis, scientific interpretation, or citation generation without verification.
